P a g e 1. Hierarchical Multiple
Linear Regression In hierarchical
linear regression, models are
fitted to a dataset predicting a
single outcome variable (usually);
where each model is constructed
by adding variables to an initial
equation, and computing a
deviation R-square Thu, 17 May

and Interpreting Interactions in
Multiple Regression - In
statistics, linear regression is a
linear approach to modelling the
relationship between a scalar
response (or dependent variable)
and one or more explanatory
variables (or independent
variables).The case of one
explanatory variable is called
simple linear regression.For more
than one explanatory variable, the
process is called multiple linear
regression. Mon, 23 Apr 2018

BackgroundAn evolving
understanding of the
immunopathogenesis of multiple
sclerosis suggests that depleting
B cells could be useful for
treatment. We studied
ocrelizumab, a humanized
monoclonal antibody that
selectively depletes
CD20-expressing B cells, in the
primary progressive form of the
disease. MethodsIn this phase 3
trial, we randomly assigned 732
patients with primary progressive
